

Raccordi accessori Sprint® Serie S2000

Filetti dei raccordi: cilindrici (G1/8, G1/4, G3/8, G1/2),
conici (R1/8, R1/4, R3/8, R1/2)

I raccordi accessori Serie S2000 sono caratterizzati da una grande affidabilità dei filetti femmina, sia cilindrici che conici, con superfici non piane. I modelli Sprint sono dotati di un particolare sistema di tenuta, già alloggiato sul filetto conico, che rende superfluo l'uso di collanti liquidi o del nastro PTFE ottimizzando la fase di montaggio.

Grazie a questo sistema di tenuta è possibile montare e smontare più volte il raccordo senza pregiudicare la tenuta sul filetto.

CARATTERISTICHE GENERALI

Materiale	OT nichelato e PTFE
Filettature	GAS conico ISO 7 (BSPT) GAS cilindrico ISO 228 (BSP)
Pressione	40 bar
Fluido	Aria compressa ed altri fluidi a bassa pressione.
Temperatura	-40°C + 120°C

Raccordi accessori Serie X2000 in Acciaio Inox 316L

 Novità

Filetti dei raccordi: cilindrici (G1/8, G1/4, G3/8, G1/2, G3/4),
conici (R1/8, R1/4, R3/8, R1/2, R3/4)

I raccordi Serie X2000 in acciaio inossidabile AISI 316L sono disponibili in diverse configurazioni per soddisfare le richieste del cliente in termini di affidabilità e adattabilità alle proprie esigenze.

Possono essere utilizzati all'interno di impianti pneumatici, oleodinamici (a bassa pressione), idropneumatici e trovano impiego in diversi settori tra cui quello alimentare, quello chimico e quello medicale.

4

COLLEGAMENTO

CARATTERISTICHE GENERALI

Materiale	corpo = acciaio INOX 316L guarnizioni = FKM
Filettature	GAS conico ISO 7 (BSPT) GAS cilindrico ISO 228 (BSP)
Pressione	40 bar
Fluido	Aria compressa ed altri fluidi a bassa pressione.
Temperatura	-40°C + 120°C

Tubi, spirali e accessori

Tubi: PVC rinforzato, Poliammide PA12, Poliesteri Hytrel, Polietilene, PU

Diametri: 4/2, 5/3, 6/4, 8/6, 10/8, 12/10, 15/12,5 mm

Camozzi propone una gamma di tubi e spirali con caratteristiche specifiche che li rendono adatti alle molteplici esigenze tecniche degli utilizzatori finali. Grazie all'impiego di materie prime di alta qualità e con un basso peso specifico, questi prodotti hanno ingombri e peso molto ridotti. Hanno inoltre un'ottima resistenza a sollecitazioni, flessioni alternate e vibrazioni.

L'elevata specularità delle superfici interne di passaggio dei fluidi (rugosità 0,6 micron circa) permette di ridurre al minimo le perdite di carico e di ottenere portate notevolmente più elevate a parità di diametro. I tecnopolimeri impiegati sono particolarmente resistenti all'invecchiamento, garantendo una lunghissima durata nel tempo.
